# **The AdminCenter Account for the vPBX Administrator**

## **The Login Credentials of the vPBX Administrator**

The vPBX administrator can configure the password for its AdminCenter user account. The username can only be changed by the system administrator/operator of the provider.

An email address can be configured where instructions will be sent for recovering the login.

## **Procedure in Case of Loss of the Login Credentials**

If login details are lost then the following procedures are possible for regaining the access:

1. If an email address was configured then click in the AdminCenter login window the link "Forgotten username or password?". Then instructions will be sent to this email address to enable the access again.  
or
2. The system administrator / operator of the provider may set the login data again

## **Used Language in the AdminCenter GUI**

The to use language of the AdminCenter GUI can be configured.

## **Renew the Password Upon First Access**

It can be defined if the user has to renew the password upon the first AdminCenter access.

## **Deblock an AdminCenter Account**

If an AdminCenter account is blocked then this is displayed with a selected box. By clicking the button [ Deblock ] it can be deblocked.

## **Limitation of the IP Subnet for the AdminCenter Access**

### **Limitation of the IP Subnet for the Access**

With this feature it is possible to define an IP subnet where the user is allowed to access this AdminCenter account.

The IP subnet is defined with the parameter "Network" . Several comma separated IP subnets are possible.  
Example:

172.1.1.0/24,192.168.10.0/24

## **Limitation of the IP Subnets with an Access Profile**

With this feature it is possible to define a set of IP subnets where the user is allowed to access this AdminCenter account.

The provider prepares the available "Access Profiles" . Check with the provider which IP subnets are associated with an access profile.

# Configuration

## Where to Configure this Feature

As vPBX administrator:

→ Tab "PBX"

→ Tab "Web"

## Parameter Configuration
